MARK SCHEME for the May/June 2012 question paper

for the guidance of teachers

9706 ACCOUNTING

9706/43 Paper 4 (Problem Solving – Supplement), maximum raw mark 120

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2012 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

(b) ROCE 2012 = $\frac{82\,350\ \mathbf{1}}{324\,330\ \mathbf{1}} \times 100\% = 25.39\%$ **1OF**

ROCE 2013 = $\frac{116\,000\ \mathbf{1}}{429\,330\ \mathbf{1OF}} \times 100\% = 27.02\%$ **1OF**

The ROCE has increased so Chipperfield Ltd has benefited from the acquisition. **1OF** [7]

(c) **Bonus issue**: Not a feasible option **1** since cash will not be raised **1**

Issue of 10% debentures: Interest payments must be made even if the company makes a loss **1** but if the company makes higher profits than anticipated they will not be required to increase the interest payments **1**.

Cash will be required for the redemption **1**

New share issue: The issue of new shares could affect control **1**.

Dividends would only be paid if sufficient profits are available **1**.

Rights issue: The issue would not affect control **1**. Dividends would only be paid if sufficient profits are available **1**.

(b) ARR = $\frac{\text{Average profit}}{\text{Average investment}} \times 100\%$

$\frac{284\,300\ \mathbf{1OF}}{4\quad\mathbf{1}} - 62\,500\ \mathbf{1} = \frac{8\,575}{125\,000}\ \mathbf{1OF} \times 100\% = 6.86\%$ **1OF**

$\frac{250\,000}{2} = 125\,000$ **2** [7]

(d) The directors should not proceed with the proposal **1** because the NPV is negative **1**. The calculated ARR, however, is poor and is below the cost of capital **1**. Other factors may also affect the decision **1**. [4]

(e) (i) The internal rate of return is the rate which gives a zero net present value. **2**

or

Discount rates below the IRR will result in a feasible project and vice versa. **2** [2]

(ii) If it is lower. **1** the proposal should be rejected **1** and vice versa **1** Since the NPV is negative at 10% **1** the IRR is lower than the cost of capital **1**. [Max 3]
