Paper 2 Structured Questions **October/November 2025**

MARK SCHEME

Maximum Mark: 90

**Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2025 series for most Cambridge IGCSE, Cambridge International A and AS Level components, and some Cambridge O Level components.

## Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptions for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

| |
|---|
| GENERIC MARKING PRINCIPLE 5:<br><br>Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen). |
| GENERIC MARKING PRINCIPLE 6:<br><br>Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind. |

**Social Science-Specific Marking Principles**
**(for point-based marking)**

**1 Components using point-based marking:**

- Point marking is often used to reward knowledge, understanding and application of skills. We give credit where the candidate's answer shows relevant knowledge, understanding and application of skills in answering the question. We do not give credit where the answer shows confusion.

From this it follows that we:

**a** DO credit answers which are worded differently from the mark scheme if they clearly convey the same meaning (unless the mark scheme requires a specific term)
**b** DO credit alternative answers/examples which are not written in the mark scheme if they are correct
**c** DO credit answers where candidates give more than one correct answer in one prompt/numbered/scaffolded space where extended writing is required rather than list-type answers. For example, questions that require *n* reasons (e.g. State two reasons …).
**d** DO NOT credit answers simply for using a 'key term' unless that is all that is required. (Check for evidence it is understood and not used wrongly.)
**e** DO NOT credit answers which are obviously self-contradicting or trying to cover all possibilities
**f** DO NOT give further credit for what is effectively repetition of a correct point already credited unless the language itself is being tested. This applies equally to 'mirror statements' (i.e. polluted/not polluted).
**g** DO NOT require spellings to be correct, unless this is part of the test. However spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. Corrasion/Corrosion)

**2 Presentation of mark scheme:**

- Slashes (/) or the word 'or' separate alternative ways of making the same point.
- Semi colons (;) bullet points (•) or figures in brackets (1) separate different points.
- Content in the answer column in brackets is for examiner information/context to clarify the marking but is not required to earn the mark (except Accounting syllabuses where they indicate negative numbers).

© Cambridge University Press & Assessment 2025

**3 Calculation questions:**

- The mark scheme will show the steps in the most likely correct method(s), the mark for each step, the correct answer(s) and the mark for each answer
- If working/explanation is considered essential for full credit, this will be indicated in the question paper and in the mark scheme. In all other instances, the correct answer to a calculation should be given full credit, even if no supporting working is shown.
- Where the candidate uses a valid method which is not covered by the mark scheme, award equivalent marks for reaching equivalent stages.
- Where an answer makes use of a candidate's own incorrect figure from previous working, the 'own figure rule' applies: full marks will be given if a correct and complete method is used. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

**4 Annotation:**

- For point marking, ticks can be used to indicate correct answers and crosses can be used to indicate wrong answers. There is no direct relationship between ticks and marks. Ticks have no defined meaning for levels of response marking.
- For levels of response marking, the level awarded should be annotated on the script.
- Other annotations will be used by examiners as agreed during standardisation, and the meaning will be understood by all examiners who marked that paper.

© Cambridge University Press & Assessment 2025

## Annotations guidance for centres

Examiners use a system of annotations as a shorthand for communicating their marking decisions to one another. Examiners are trained during the standardisation process on how and when to use annotations. The purpose of annotations is to inform the standard isation and monitoring processes and guide the supervising examiners when they are checking the work of examiners within their team. The meaning of annotations and how they are used is specific to each component and is understood by all examiners who mark the component.

We publish annotations in our mark schemes to help centres understand the annotations they may see on copies of scripts. Note that there may not be a direct correlation between the number of annotations on a script and the mark awarded. Similarly, the use of an annotation may not be an indication of the quality of the response.

The annotations listed below were available to examiners marking this component in this series.

## Annotations

| Annotation | Meaning |
|---|---|
|  | Uncertain what the candidate means – an illogical line of thought |
|  | Benefit of the doubt |
|  | Blank page |
|  | Caret – a word is missing. |
|  | Confused |
|  | Cross |
| Highlighter | Highlight |
|  | Nothing creditworthy |
|  | Level 1 |

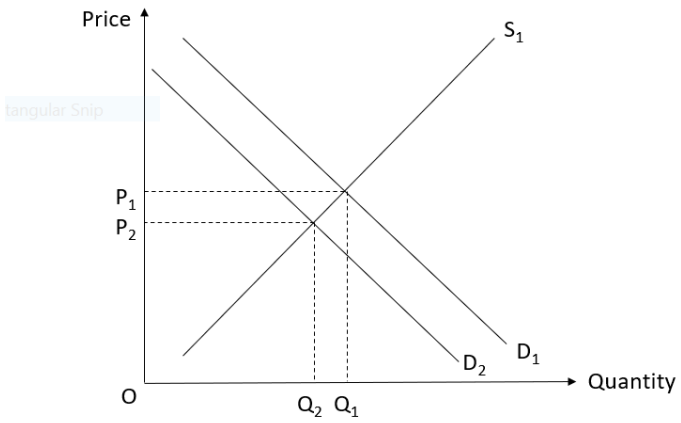

© Cambridge University Press & Assessment 2025

| Annotation | Meaning |
|---|---|
| L2 | Level 2 |
| L3 | Level 3 |
| MAX | MAX |
| NAQ | Not answered question |
| NE | Not established – a statement made without any support |
| REP | Repetition |
| SEEN | SEEN |
|  | Tick – a credit worthy point |
| TV | Too vague |
| On-page comment | To be used when a candidate has misidentified a question they have answered e.g.:<br>This is an answer to **Q4(c)** and not **Q5(c)**. |

© Cambridge University Press & Assessment 2025

| Question | Answer | Marks | Guidance |
|---|---|---|---|
| 1(a) | **Calculate the number of Malawians who had access to electricity in 2022.**<br><br>3.3 m or 3 300 000. | **1** | Accept $3.3 \times 10^6$. |
| 1(b) | **Identify <u>two</u> capital goods used in Malawi.**<br><br>Two from:<br>Factories (1) power stations (1) solar panels (1) electricity (1) fertilisers (1). | **2** | If more than two capital goods are given, consider the first three. |
| 1(c) | **Explain what is likely to have happened to Malawi's production possibility curve (PPC) in January 2022.**<br><br>• It is likely to have shifted to the left / inside / inwards / contract (1).<br>• due to natural disasters / Storm (Ana) / resources destroyed / productive capacity (or land) reduced / less labour (1). | **2** | Accept an accurate and fully labelled PPC diagram showing the PPC shifting to the left for the first mark.<br><br>Second mark for any relevant reason from the source material. |
| 1(d) | **Explain <u>two</u> reasons why the supply of Malawian tea may increase.**<br><br>Logical explanation which might include:<br><br>• good weather conditions (1) would increase crop yields / prevent crops being destroyed (1).<br>• government subsidies (1) provide a financial incentive / additional payment to that received from consumers / reduce costs of production (1).<br>• fall in price of fertiliser (1) which reduces cost of production / increase crop yields / allows farmers to purchase more fertiliser (1).<br>• fall in exchange rate (1) higher demand for Malawian tea (1). | **4** | One mark each for two reasons identified and one mark each for two explanations.<br><br>If more than two reasons are given, consider the first three.<br><br>Do not accept an answer that links tea with sugar. |

© Cambridge University Press & Assessment 2025

| Question | Answer | Marks | Guidance |
|---|---|---|---|
| 1(e) | **Draw a demand and supply diagram to show the effect of a report stating the health risks of consuming sugar on the market for sugar.**<br><br>Coherent analysis which might include the following.<br><br>D&S diagram:<br>• Axes correctly labelled – price and quantity or p and q (1).<br>• Original demand and supply curves correctly labelled (1).<br>• New labelled demand curve shifted to the left (1).<br>• Equilibriums – shown by lines $P_1$ and $Q_1$ and $P_2$ and $Q_2$ or equilibrium points marked as $E_1$ and $E_2$ (1). | **4** |  |
| 1(f) | **Analyse the relationship between GDP per head and the percentage of children who complete primary education.**<br><br>Coherent analysis which might include the following.<br><br>Expected relationship:<br>Generally, a direct / positive relationship (1) the higher the GDP per head, the higher the percentage of children who complete primary education (1). | **5** | Responses do not have to be in the format suggested but they should address the expected / normal relationship, offer supporting evidence of that, highlight any exceptions to that, and analyse the overall data.<br><br>Supporting evidence should involve interpretation, not just description e.g. simply quoting data without reference to high or low. |

© Cambridge University Press & Assessment 2025

| Question | Answer | Marks | Guidance |
|---|---|---|---|
| 1(f) | Supporting evidence:<br>Four countries with the highest GDP per head had the highest percentage of children who complete primary education / Malawi / Uganda have the lowest of both (1).<br><br>South Africa had the highest GDP per head and the highest percentage of children who complete primary education (1).<br><br>Comparison of two countries (e.g. Namibia and Senegal where GDP falls as does percentage of children completing primary education).<br><br>Analysis of the expected relationship:<br>Parents in countries with high incomes are more likely to be able to afford to keep their children in primary education (1).<br><br>Government tax revenue is likely to be higher in countries with high incomes and so will be able to spend more on primary education (1).<br><br>Completing primary education may increase the chance of skilled / occupationally mobile high income earning workers (1).<br><br>Exception:<br>Malawi / Uganda (1) Malawi has a lower GDP per head but a higher percentage of children who complete primary education than Uganda (1).<br><br>Analysis of exception:<br>A higher percentage of children may complete primary education but the quality of the education may be low leading to a low GDP per head / GDP per head may be high but there may be a high degree of inequality with a relatively high proportion of the population unable to keep their children in primary education (1). | | |
