Section A: Research Methods

For Examiner's Use

1 Participant observation is a research strategy that aims to gain a close and detailed understanding of a particular area of study. This method usually involves the study of a small group where the researcher becomes involved with the people in their natural environment. This research may be covert or overt. Covert participant observation is regarded as less ethically acceptable than overt observation.

With both types of participant observation, there is a risk that the researcher may identify too closely with the group they are studying and stop viewing their behaviour with objectivity. Because this research approach produces qualitative data, it is difficult to compare one piece of research with another. The researcher may also experience difficulties in recording accurately what they observe when studying the group.

Non-Participant observation is another method used to study group activities. It is seen as more ethically acceptable than covert participant observation. However, this method has a number of limitations which may damage the validity of the study. Sociologists also use various forms of interviews to gain detailed information, but these may lack the detail that can be achieved using participant observation.

(a) In sociological research, what is meant by the following terms:

(i) covert observation

Section C: Social Stratification and Inequality

For Examiner's Use

4 In modern industrial societies there are more opportunities for individuals to improve their life chances.

(a) What is meant by the term *life chances*?

.....

.....

.....

.....[2]

(b) Describe **two** ways through which an individual can improve their life chances.

.....

.....

.....

.....

.....

.....

.....

.....[4]

(c) Explain why people in traditional societies are likely to have fewer life chances.

For Examiner's Use
