ENVIRONMENTAL MANAGEMENT **0680/22**

Paper 2 **October/November 2013**

1 hour 45 minutes

Candidates answer on the Question Paper.

Additional Materials: Ruler

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.
Write in dark blue or black pen.
You may use a soft pencil for any diagrams, graphs or rough working.
Do not use staples, paper clips, highlighters, glue or correction fluid.
DO **NOT** WRITE IN ANY BARCODES.

Answer **both** questions.
Electronic calculators may be used.
You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.
The number of marks is given in brackets [ ] at the end of each question or part question.

For Examiner's Use	
1	
2	
Total	

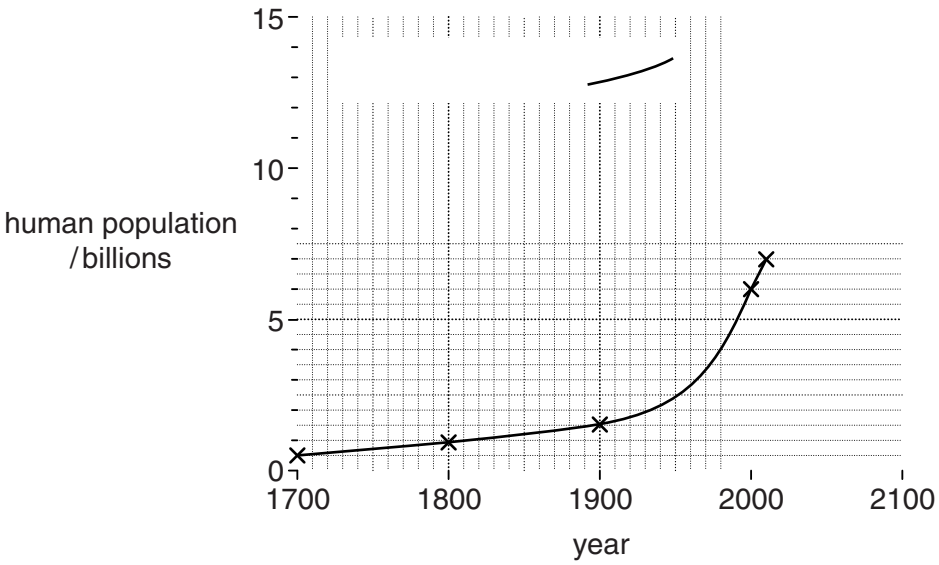

This document consists of **18** printed pages and **2** blank pages.

1 **(a)** The United Nations estimated that by October 31st 2011 t
reached seven billion.
Look at the graph of world population growth from 1700–201

(i) Around which date did total world population reach 1 billion?

.....[1]

(ii) Describe what the graph shows about population growth since 1700.

.....

.....

.....

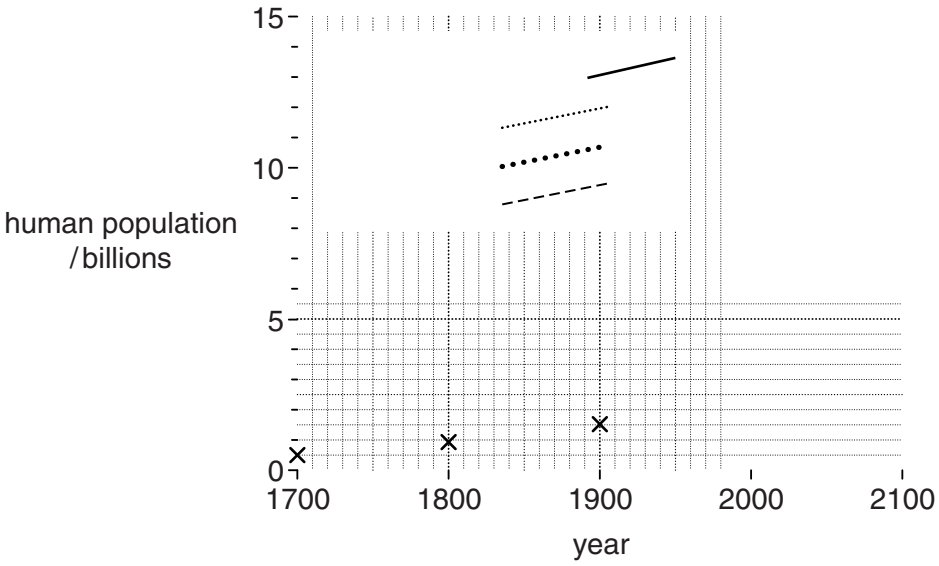

.....

.....

.....[3]

© UCLES 2013

(b) Look at the graph showing estimates made in 2011 for future

(i) Describe what each of the three estimates shows about future population growth up to 2100.

A .....

.....

B .....

.....

C .....

.....[3]

PA CAMBRIDGE

(ii) Suggest reasons for the wide variations between the thre population growth.

.....

.....

.....

.....

.....

.....[3]

(iii) State which estimate, in your view, is most likely. .....

Explain the reasons for your view. .....

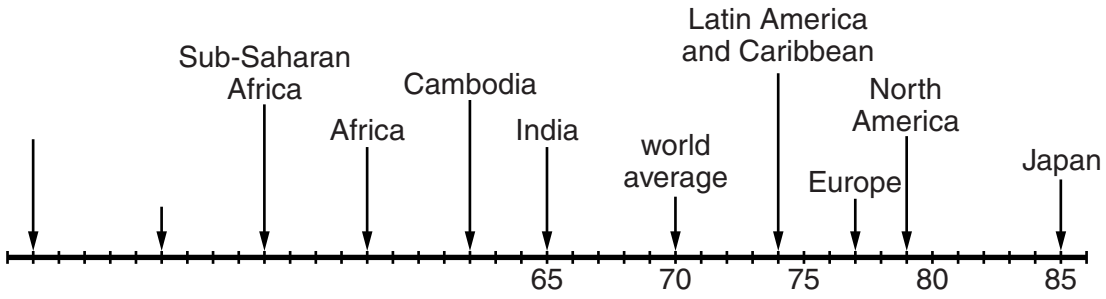

.....

.....[2]

(c) One reason for world population growth is increasing life expectancy.

Look at the graph showing examples of life expectancy in 2011 for some countries, world regions and continents.

life expectancy 2011 by country, world region and continent

(i) How big is the difference in years between the countries with the highest and the lowest life expectancies?

.....[1]

© UCLES 2013

(ii) Suggest what is the most important reason for diffe between countries, world regions and continents like the Explain your answer.

.....

.....

.....

.....

(iii) Describe other, additional causes of very low life expectancies (below 60) in some countries.

.....

.....

.....

.....

.....

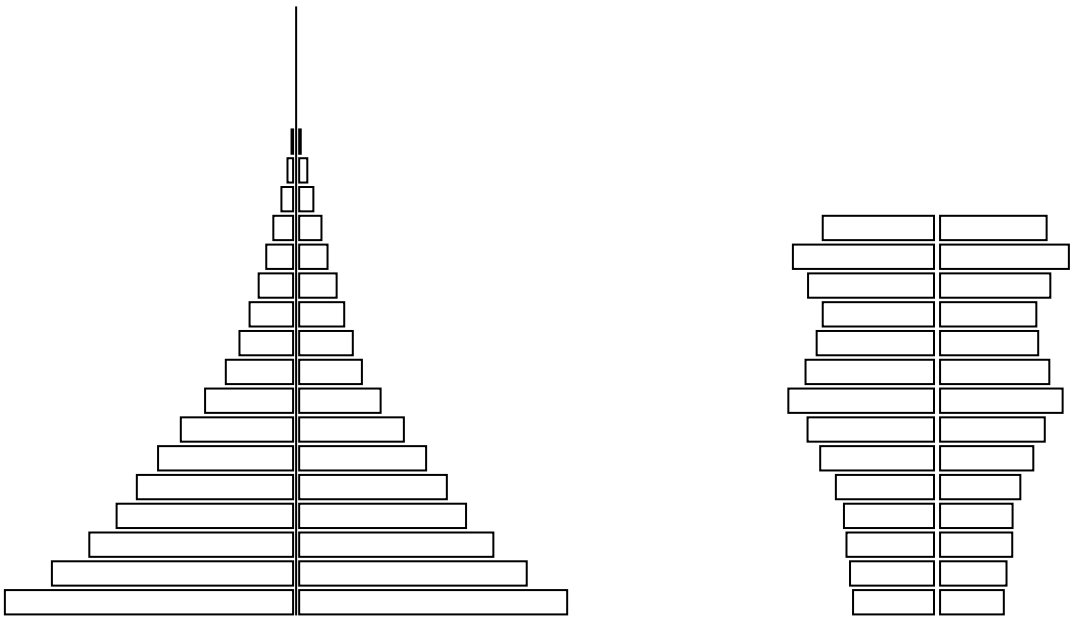

.....[3]

PA CAMBRIDGE

(d) Look at the population pyramids for Nigeria (West Africa) and

population structure in Nigeria and Japan

(i) State **two** differences in shape between the population pyramids for Nigeria and Japan.

.....

.....

.....

.....[2]

(ii) On the graphs, shade in:

- the part of the population under 15 years old in Nigeria
- the part of the population 65 years old and over in Japan. [1]

© UCLES 2013

(iii) The part of the population aged between 15 and 64 yea
contribution to a country.

Explain what is different about this part of the populati
make an important contribution to a country, compare
shaded on the graph.

.....

.....

.....

.....[2]

(iv) What is the percentage of total population below 15 years old in Nigeria?
Circle one answer.

16% **22%** **31%** **42%** [1]

(v) Describe some of the disadvantages **and** advantages for a country of having a young population structure, as shown for Nigeria.

.....

.....

.....

.....

.....

.....

.....

.....[4]

(vi) Explain if, in your view, the disadvantages of having a young population in a country are greater than the advantages.

your view .....

explanation .....

.....

.....[2]

(e) (i) The pyramid for Japan shows that it has an ageing p
meant by an ageing population.

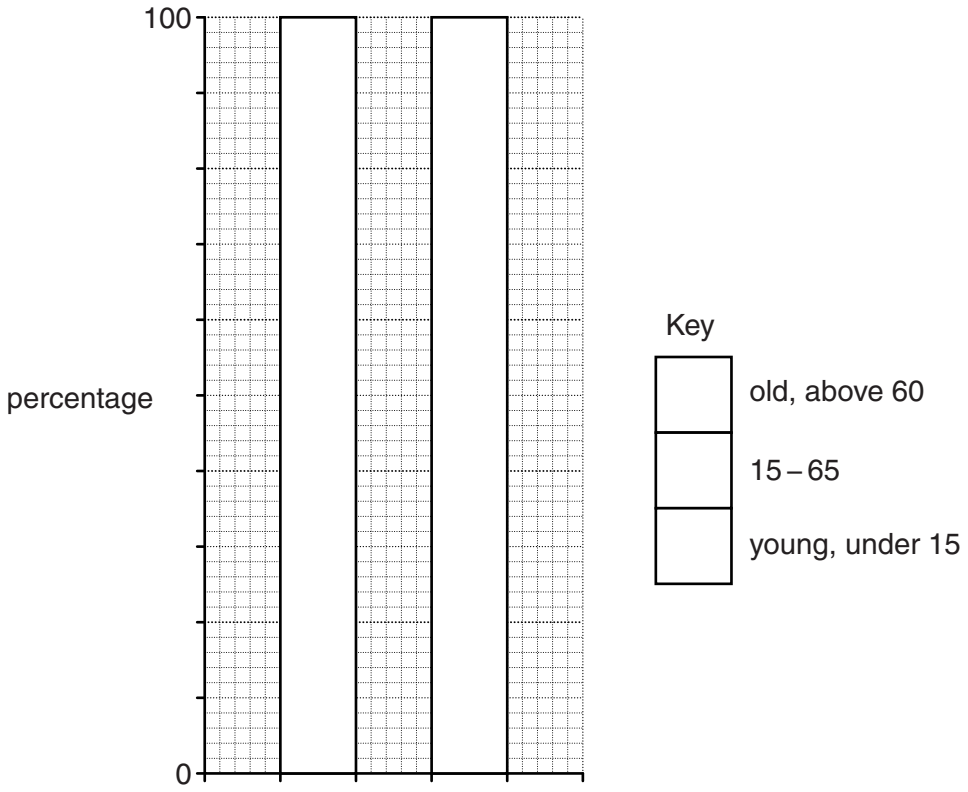

.....

.....

(ii) The table shows information about population structure
the UK for 2010.

population data (2010)

	population structure			fertility	
	under 15	15 – 60	above 60	children per woman	birth rate per 1000
Japan	13%	64%	23%	1.3	8.2
UK	17%	60%	23%	1.8	12.2

Complete the divided bar graphs, axes and key on the grid above, to show the population structures for Japan and the UK. [3]

© UCLES 2013

(iii) What are the main economic problems for government populations?

.....

.....

.....

.....

.....

.....[3]

(iv) The population data in the table suggests that the economic problems of an ageing population will be worse in one of the countries than in the other in 15 years time.

Which country is likely to have greater economic problems? Explain your choice.

the country likely to have greater economic problems .....

2 **(a)** Look at the water cycle diagram. Letters **D**, **E**, **F**, **G**, **H**, **J** a
cycle processes listed below.

condensation **evaporation** **groundwater fl**

precipitation **surface run-off** **tran**

(i) In the spaces on the diagram, name the seven water cycle processes shown. [3]

© UCLES 2013

PA CAMBRIDGE

(ii) The position of the water table is shown on the diagram.

Explain why the level of the water table can be important

.....

.....

.....

.....

(iii) State the source of the water which fills the groundwater store.

.....[1]

(iv) Explain why the location chosen for the dam on the diagram was considered to be the best place for siting a dam and reservoir.

.....

.....

.....

.....[2]

(b) There are at least 45,000 large dams in the world. Nearly half of the world's largest rivers have at least one large dam on them.

(i) Name an example of a large dam and state its location.

.....

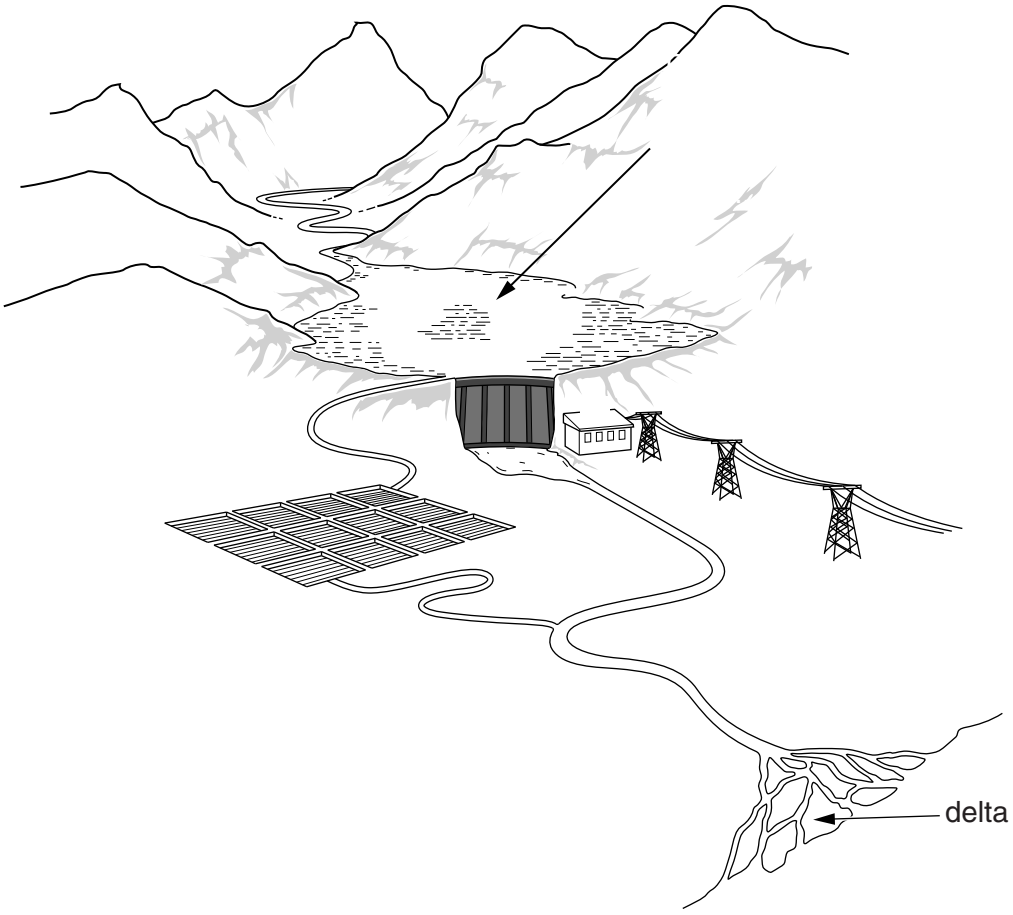

.....[1]

© UCLES 2013

PA CAMBRIDGE

(ii) Most large dams are described as multi-purpose dams, different uses. Look at the diagram below.

a large dam and some of its uses

In the box on the diagram, write in **two** different uses of reservoirs for people living in the area around it. [2]

(iii) What is being made at **M** on the diagram?

.....[1]

(iv) Describe how the water from the reservoir is being used at **N**.

.....

.....

.....[2]

PA CAMBRIDGE

(d) Building large dams on rivers can also cause problems downstream in the river delta.

What has happened in the Indus delta in Pakistan is one exa and more of the water in the river Indus and its tributaries dams in northern Pakistan. The water is taken out mainly f supply Pakistan's rapidly growing big cities.

Look at the information for a small town located in the Indu was like in 1980 with 2010.

small town in the Indus delta of Pakistan

	1980	**2010**
River Indus	5 km width of river channels	One channel 200 metres wide
view from a river bridge	Dominated by water – the mighty Indus River	Dominated by sand – the Indus looks like a canal in one small river channel
land	Fertile silt, renewed every year by the summer floods	Without fresh silt deposits, the sea is eroding the delta land and many soils are now 'brackish' (salt affected) and useless for farming
economy	Main income from river fishing and shrimp collecting	River fishing has collapsed; the few fishermen still working go out to sea to catch crabs
	Also farming – bananas, coconuts, grapes using irrigation water pumped from the Indus	Collecting firewood is now more important than farming; river levels have dropped so low that the old water pumps cannot work
population	15 000	3000

(i) Describe the environmental and economic problems caused in this delta town by so much water being taken out of the River Indus in northern Pakistan.

(ii) What is the evidence for out-migration from this delta to

.....

(iii) Push and pull factors can be used to explain why pe
urban areas in developing countries such as Pakistan.
To explain migration from this town in the Indus delta, w
– push factors or pull factors? Explain your view.

.....

.....

.....

.....

.....

.....[3]

(iv) Suggest how likely it is that the town's population will continue to decline after 2010.

Explain your answer.

.....

.....

.....

.....[2]

(e) Most people who migrate from rural areas in Pakistan go to the big cities, such as Karachi. Karachi is the world's 10th biggest city with at least 13 million inhabitants. It has many urban problems, including housing.

(i) Describe the housing problems found in most big cities of the developing world.

.....

.....

.....

.....

.....

.....[3]
