Paper 2 **October/November 2020**

MARK SCHEME

Maximum Mark: 50

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2020 series for most Cambridge IGCSE™, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

This document consists of **7** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
Section A		
1(a)	Constant name `MaxSalad` Value 3 Use Storing the salad items a baguette can have Variable name `OrderNumber` Data type integer Use storing the next order number available Many correct answers, this is an example only.	**6**

Question	Answer	Marks

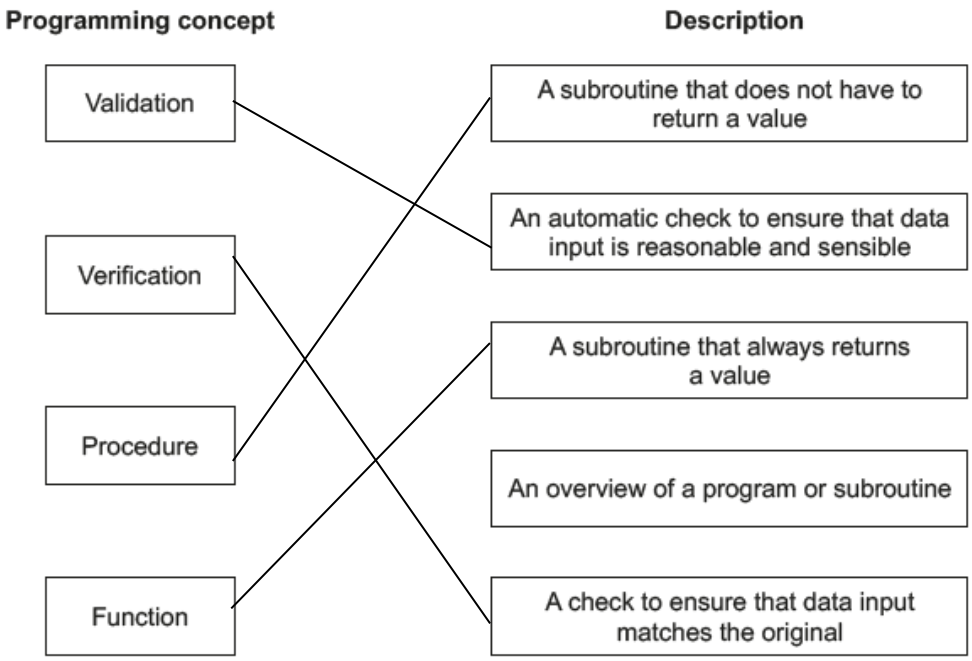

1(b)(i)	Any **five** from:
	MP1 Display fillings available
	MP2 Prompt and entry of filling choice
	MP3 Only accept one correct filling
	MP4 Prompt and entry of number of salads
	MP5 Only accept 0 to 3 inclusive
	MP6 Display salads available
	MP7 Prompt and entry of correct number of salad choices
	MP8 Only accept correct salad choices
	MP9 At least one error message for incorrect data entry
	
	Example answer:
	`REPEAT`
	`  PRINT "Beef  1"`
	`  PRINT "Chicken  2"`
	`  PRINT "Cheese  3"`
	`  PRINT "Egg  4"`
	`  PRINT "Tuna  5"`
	`  PRINT "Turkey  6"`
	`  OUTPUT "Please enter your choice of filling"`
	`  INPUT Filling`
	`UNTIL Filling >=1 AND Filling <=6`
	`PRINT "Lettuce  1"`
	`PRINT "Tomato  2"`
	`PRINT "Sweetcorn  3"`
	`PRINT "Cucumber  4"`
	`PRINT "Peppers  5"`
	`REPEAT`
	`  PRINT "How many salads do you want"`
	`  INPUT NumSalad`
	`UNTIL NumSalad >= 0 and NumSalad <=3`
	`WHILE NumSalad >0 DO`
	`  PRINT "Enter Salad ", NumSalad`
	`  OUTPUT "Please enter your choice of salad"`
	`  INPUT SaladType`
	`  CASE SaladType OF`
	`  1: NumSalad ← NumSalad - 1`
	`  2: NumSalad ← NumSalad - 1`
	`  3: NumSalad ← NumSalad - 1`
	`  4: NumSalad ← NumSalad - 1`
	`  5: NumSalad ← NumSalad - 1`
	`  OTHERWISE: PRINT "Error"`
	`  ENDCASE`
	`  Salad[NumSalad] ← SaladType`
	
	`ENDWHILE`
		5

1(b)(ii)	Any **three** from: MP1 Provide a method of inputting the filling selection MP2 Check input is a correct filling e.g. using a `CASE` statement MP3 If not output a suitable error message MP4 If not provide a suitable method to re-input e.g. use of `REPEAT…UNTIL`	**3**

Question	Answer	Marks
1(c)	Any **two** from: MP1 Store three sizes of baguette e.g. add third baguette size to array MP2 Change the prompt to output three sizes of baguettes MP3 Change the selection statement to allow for a third size of baguette e.g. `IF/REPEAT/WHILE`…	**2**
1(d)	Explanation Any **four** from: MP1 check the total for **each** of the baguette fillings e.g. use of `FOR` loop MP2 use of two variables one for most popular filling and one for least popular filling MP3 method used to select the largest value as the most popular e.g. use of `IF` statement MP4 method used to select the smallest value as the least popular e.g. use of `IF` statement MP5 Use these values to calculate percentages MP6 … with the total number of baguettes sold MP7 Display results including suitable messages e.g. use of `PRINT` statement … Programming statements can be used but must be explained.	**4**

Question	Answer	Marks
Section B		
2(a)	Line 1/2/8/12 Line 3 and/or 14 Line 8/12 Line 6/10/15/19	**4**
2(b)	**One** mark for error and correction Line 02 `TooCold ← 0` Line 08 `TooCold ← TooCold + 1` Line 15 `IF TooHot > 5` Line 17 `OUTPUT "Alarm!!"`	**4**
2(c)	Any **four** from: Add a new variable `inRange` … … set to zero at start of algorithm Add extra `IF` statement `IF temperature >= -25 AND temperature <= -18` Update `inRange` by 1 if true	**4**

Question	Answer	Marks
3	**One** mark for each correct line  	**4**

Question	Answer	Marks
4(a)	**One** mark for each correct column **Y** | **Z** | **A** | **OUTPUT** 11 | 4 | 3 | Invalid 6 | 2 | 0 | Valid 3 | 9 | 0 | Valid 3 | 2 | 1 | Invalid 2 | 6 | 0 | Valid 0 | 0 | |	**4**
4(b)	Any **two** from: Checking if the remainder, when the larger number is divided by the smaller number, is zero To see if the larger number is a multiple of the smaller number To see if the smaller number is a factor of the larger number	**2**
